

Setting up Virtual Environment in Windows

In this lab exercise I set up the virtual environment for python in windows as per the steps specified [here](#). By doing this exercise I got to learn:

- Some important commands like creating directories, changing to different directories etc.
- how to create a virtual environment using virtualenv
- by creating a virtual environment, we can isolate the package installation from that of system.
- How to install packages in a virtual environment as well as in system using pip command.
- How to activate and deactivate a virtualenv.
